**The Dissertation Committee for Sung-Chang Lee Certifies that this is
the approved version of the following dissertation:**

**IDENTIFICATION OF THE PORE-LINING HELICES OF
CONNEXIN 43 GAP-JUNCTIONAL HEMICHANNELS**

Committee:

Guillermo A. Altenberg, M.D., Ph.D.

Andrés Oberhauser, Ph.D.

Robert O. Fox, Ph.D.

Juan Carlos Sáez, Ph.D.

Krishna Rajarathnam, Ph.D.

Dean, Graduate School

**IDENTIFICATION OF THE PORE-LINING HELICES OF
CONNEXIN 43 GAP-JUNCTIONAL HEMICHANNELS**

by

Sung-Chang Lee, MS

Dissertation

The University of Texas Medical Branch

in Partial Fulfillment

of the Requirements

for the Degree of

Doctor of Philosophy

The University of Texas Medical Branch

March, 2008

Dedication

To my supporting wife Seung-Hee

Acknowledgments

The journey to be a Ph.D. was more than a fun because of continuous supporting of young fellows, colleagues, and loving family over three years. Here, I specially want to thank Dr. Guillermo A. Altenberg, my dissertation advisor and committee chairman, for his creative ideas that gave me not only a lot of challenge to study but also pleasure after accomplishing my project. I also thank his financial support that allowed me to come to UTMB at the very beginning. Without his patience, encouragement and professional guidance, I would not have completed my graduate career. He provided me with research direction, technical training for writing and he was the best supervisor as well as family. I know that his enthusiasm for science will continuously impact my life.

I also would like to thank Dr. Luis Reuss. I would not have been able to finish my graduate study without his support with every aspect of this dissertation. I would like to thank other members of my committee, Dr. Andrés Oberhauser, Ph.D., Dr. Krishna Rajarathnam, Ph.D., Dr. Juan Sáez, Ph.D., and Dr. Robert Fox, Ph.D. for their assistance at all levels of this dissertation project.

I would like to thank the Cellular Physiology and Molecular Biophysics program directors and administrative staff in the Department of Neuroscience and Cell Biology, Drs. Malcolm S. Brodwick, Mark R. Hellmich, and Cindy Cheatham, Julie Melchor, for their kind and continuous assistance during the past three years. I would like to thank Dr. Xiaoyong Bao, Catherine Hamilton, Rebecca Cooper, Seung-Hee Choi for helping me to complete this dissertation project.

I would like to acknowledge the American Society for Biochemistry and Molecular Biology (2006, ASBMB Best Graduate Student Poster Presentation Honor), The University of Texas Medical Branch Graduate School of Biomedical Sciences (2006, GSBS Associates Scholarship, 2007, Mason Guest Scholar Award, and 2007, Arthur V. Simmang Academic Scholarship), and The National Institutes of Health (2007 National Graduate Student Research Festival Travel Award) for providing me opportunities to present my research in meetings.

Finally, I would like to thank my family for supporting me to pursue my Ph.D. overseas. I also truly appreciate my wife, Seung-Hee, for her loving and tireless support.
