

20 Sept 76

John:

Per your telephone request 17 Sept 76 for ASTP leg size measurements, the following are enclosed:

1. The DTO C-8.0 Inflight lower limb Volume Measurements — Report
2. Individual crew leg circumferences and volumes. Please note that both legs were measured preflight and on R+0 but only the left leg inflight and other postflight dates.

Temporal order is sometimes not sequential, but applicable dates for each column of measurements is recorded at the column top.

Inflight sheets contain both circumferences and calculated volumes (total limb and by segments).

3. The Inflight measurements copied from crew log — some illegible. You probably have access to the originals.

Hope these help.
