SMEAT DAILY REPORT

Number 12

This report covers from 0800 August 8, 1972 to 0800 August 9, 1972 (test day 14).

I. Significant Accomplishments -- Three M110 in-flight blood samples were taken without major problems. The balance of crew activities scheduled for this reporting period were accomplished without problems. The SMEAT crew took part in a 30 minute closed circuit TV press conference and did an excellent job in answering all questions.

II. Problems

A. Hardware

No major problems.

B. Facility Problems

Minor communications problems were encountered in the facility communications. These problems are being corrected.

C. Procedural Problems

No major problems.

D. Environmental Conditions

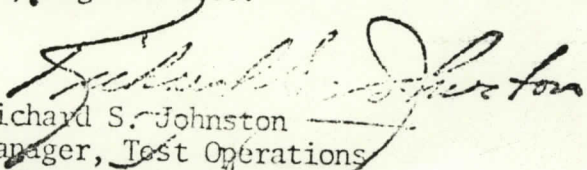

The levels of oxygen, carbon dioxide, and the temperature of the SMEAT chamber remain within specified limits.

III. Medical Summary

The crew has not encountered any medical problems to date and remains in good health.

IV. Misc. Comments

The test operation management committee weekly status meeting was held as scheduled and all medical experiments and DTO's were reviewed. Tomorrow's daily report will contain a summary of the significant findings to date.
