NOTES:

1. 301 Grams is the pan weight (so-called "zero mass").
2. All tests were run with pan surface vertical (so called "side ways").
3. Initial deflection (single amplitude) was 1/8".
4. Room temperature gradually increased from 19.74°C (Test 17) to 20.69°C (Test 34).
5. These tests were run the day after the springs were finished by the instrument shop.
6. The first two counts in a series of readings were neglected, and the next ten counts were averaged.
