

17 Mar 1 1/2 hour conversation c John McArthur, a graduate student of Art Valis from Wisconsin. Described basic problems of exercise in space & we seemed to agree. Mike G. had sent him over to talk about using the existing flight hardware - I thought. It turns out that he has been ordered by Valis/Ghisin. to do a one g, non-bed rest study of strength vs endurance training.

He also describes how Ariel has an exercise/measurement device which he is trying to fly & sell but that Krog forbade his demonstration at the recent review. Also Krog has another 'secret' apparatus that they will not show John.

Impression: it is a politico-economic morass, with one clique fighting another.
