SUBJ: STS 51-F Medical DSO Support

I'd like to extend my thanks to you and your crew for exercising the Medical DSO hardware during the recent CAP walk-thru. This was a good opportunity for us to review the hardware with participating crewmembers and identify areas which need more attention.

As a result of the walk-thru, we will be meeting with the PIs and Project Engineer for DSO 453 (Combined Blood) to more clearly define hardware configuration, procedural requirements, and the impact of piggybacking our DSO onto the experiment. All the questions will be answered in time to support the first 51-F JIS.

Again, thanks. I appreciate your cooperation in our DSO program.
