# Device(s) for Monitoring Locomotor Activity 1

## General Schemes -

A

Monitor and record physical quantities a & b by a recorder, c, and process them off line by more complex special apparatus

B. An alternative is to pre-process the signals on the subject such that the essential, ~~modified~~ characteristics of the signals are stored in modified form such that they can be processed by existing analysers eg conventional Holter recorders and replay/analysis units.

C - yet another alternative is to do recording & processing during the recording & simply store results in detail.

Looking at the various possibilities:

A -
