Blood flow - CV Test 1+2

Leg band artifacts ruined both tests on the P_xL_xT. and CDR. data was also very noisy and makes reduction questionable.

~~CDR~~
PLT should be rescheduled ^{as soon as} ~~when~~ possible and CDR when possible.

Center of Mass - this has not been accomplished and low scheduling priority should not be confused with no priority - Try to get at least one of these done for each crewman -

Mass. Meas. Cal. - These should be done in the next six days. Not yet time critical -

St. Theron, M.D.

Limb Vol. Meas. - As long as scheduling is critical measure only trunk & left arm & leg - i.e. omit right arm & leg -
St. Theron
