

# Future Missions

## JSC LIFE SCIENCES

The LSPD has recently supported Life Sciences experiments flown on the Spacelab-1, Spacelab-2, Spacelab-3, and the D-1 (German) missions. In the future, support will be given to the Life Sciences experiments on the Earth Observation Mission (EOM) 1-2, the Spacelab-J (Japanese) Mission, the International Microgravity Laboratory (IML)-1, and the Spacelab Life Sciences (SLS)-1-2 dedicated missions.

The Human Research Facility that is planned to be a part of the Space Station will provide opportunities to perform Life Sciences experiments in addition to opportunities currently available on the Spacelab missions. This facility may support research investigations in a variety of Life Sciences disciplines. A major emphasis will be placed on discovering methods for counteracting the specific physiological processes which result from long duration exposure to weightlessness.
