Dr. R. B. Voas
Assistant for Human Factors
NASA Manned Spacecraft Center
Houston 1, Texas

Dear Dr. Voas:

Thank you for your time yesterday. A brief resume of my experience and training is enclosed. Although several possibilities for work in Aerospace medicine are available with my experience, it seems essential that I have further medical education in this area. For this reason I am interested in any assignment which might allow completion of an internship and Flight Surgeon's training or its equivalent. Re-entering service seems to be one such possibility and is being explored. My goal is to work with men and aerospace craft on operational programs. Any information or comments on this would be appreciated.

Respectfully,

William Thornton, M. D.
